

Step	Script	Explanation
1	scripts/build_score_abcx.py	σ_0 XML/MXL $\rightarrow$ raw σ score.abcx. This ABCX is generated directly from the score and is not aligned yet.
2	scripts/align_score_performance.py	raw σ + score MIDI $\psi \rightarrow$ H/M structure. Score MIDI gives the initial measure grid; ABCX content mapping refines M and groups phrases H.
3a	scripts/align_score_performance.py	H/M structure + mapped ABCX content $\rightarrow \sigma^*$ aligned score.abcx. Output order is phrase marker first, then its score-MIDI-expanded measure rows.
3b	scripts/build_score_midi_tsv.py	H/M structure + score MIDI ψ events + σ annotations $\rightarrow \psi^*$ annotated score TSV. The TSV contains structural H/M rows, note/pedal event rows, and annotation rows (dynamics, articulation, expression).
4	scripts/align_score_performance.py	alignment NPZ connects score MIDI ψ and performance MIDI ϕ . H/M IDs are projected onto performed time, then written as ϕ^* performance TSV.
